

2022 Christmas Ornament

Part List:

P/N 91123 2022 Ornament Laser-Cut Sheet

Building Supplies Required:

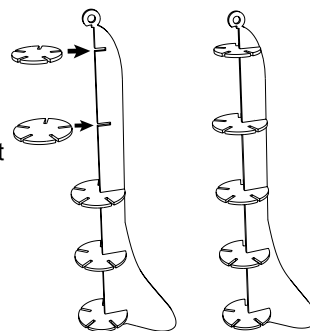

Hobby knife, white glue, spray paint

We picked the subject of our 2022 Christmas ornament based on a rocket that many people told us was a favorite. It is a plan from our *Peak-of-Flight* newsletter called the "Friendly Phantasm." The plan by Martin Jay McKee was used to celebrate Halloween, and it was so cute that many people launched one. Now you can show off a skeleton version on your Christmas tree.

Assembly Steps:

1. Carefully free the pieces from the laser-cut sheet using a hobby knife.
2. Find the smallest disk, and insert it into the top slot on the fin silhouette with the loop on top. Then insert the four larger size disks into the remaining slots on the part.

3. Take the other four fin silhouettes and insert them into the slots on the disks.
4. Run a bead of white glue along the joints in the cardstock to lock them in place. When the glue is dry, paint your ornament your favorite colors.

Congratulations! Your "Friendly Phantasm" rocket ornament is now complete.
