

## 2023 Christmas Ornament

### Part List:

P/N 91125 2023 Christmas Ornament Laser Cut Sheet

### Building Supplies Required:

Hobby knife, white glue, spray paint

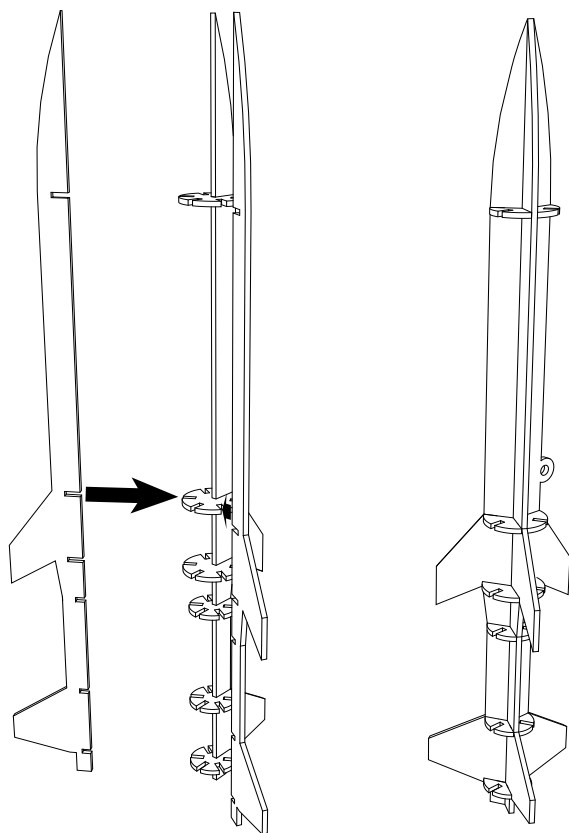

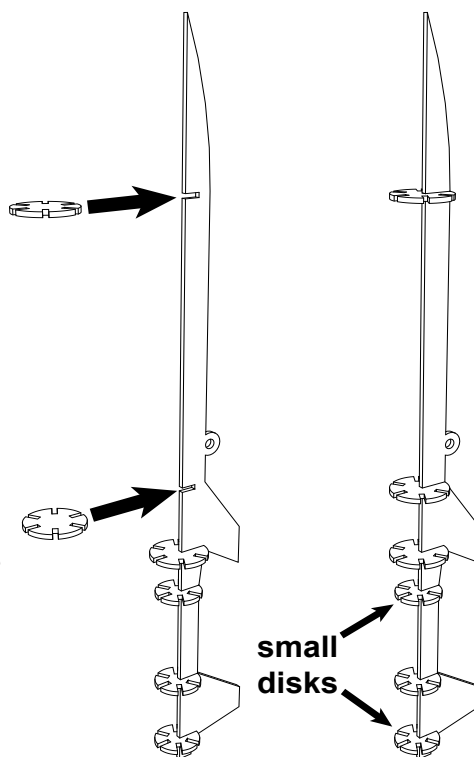

The 2023 Christmas ornament is based on the TTV kit we released earlier in the year. This kit was a surprise in many ways as it was unplanned – coming out of a need we had. When we released it, we certainly hoped that people would find it as cool as we had, but we were surprised by how popular it has become. This cartoon version of the kit provides a neat reminder of its classic look on your Christmas tree.

### Assembly Steps:

1. Carefully free the pieces from the laser-cut sheet using a hobby knife.

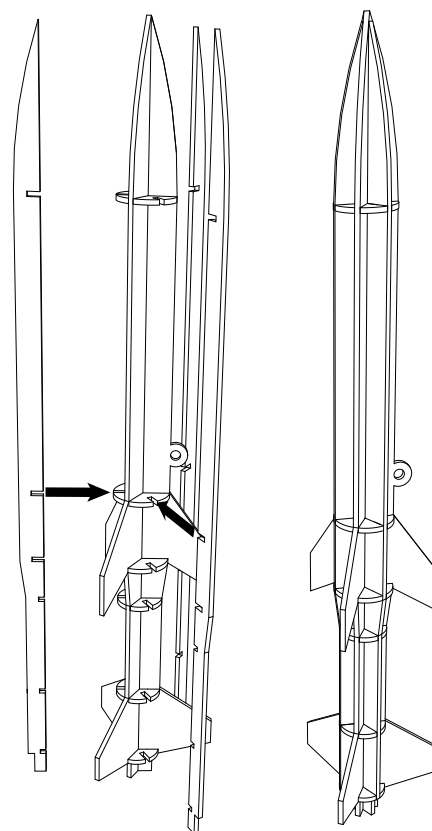

2. Find one of the three profiles with fins and also the six disks (three large and three small). Install the three larger rings into the upper three slots (toward the rounded nose) of one of the profiles and the three smaller disks into the three lower slots.

3. Install two other finned sides evenly spaced around the disk – with one open slot between each profile.

4. Take the three profiles without fins and install them between the finned sides.

5. Run a bead of white glue along the joints in the cardstock to lock the parts together. When the glue is dry, paint your ornament your favorite colors.

### Congratulations!

Your TTV rocket ornament is now complete.
